

**The Cape Town Call to Action  
Sustainable Aquaculture Development on the African Continent  
Adopted by the participants of the African Aquaculture Policy Day,  
World Aquaculture conference, 30 June 2017**

The African Union Inter-African Bureau for Animal Resources (AU-IBAR), the East African Community Lake Victoria Fisheries Organization (EAC-LVFO), the Intergovernmental Authority on Development (IGAD), the New Partnership for Africa's Development (NEPAD), the Southern African Development Community (SADC), the World Aquaculture Society and WorldFish welcome the outcomes of the African aquaculture policy day held during the World Aquaculture conference on 26–30 June 2017.

We, the participants of the African aquaculture policy day, recall our active commitment to the objective of the development of inclusive and sustainable aquaculture to underpin overarching requirements for human development, food and, importantly, nutrition security—goals of Africa that align with the UN Sustainable Development Goals (SDGs).

RECOGNISING that the first and second Conferences of African Ministers Responsible for Fisheries (CAMFA), held in Banjul, the Gambia, 2010, and Addis Ababa, Ethiopia, 2014, both emphasized the continued social and economic benefits and importance of aquaculture to African Union member states.

WHEREAS African Union member states have recognised that the potential of sustainable aquaculture needs to be fully exploited in line with policies that are coherent with national and regional development priorities.<sup>1</sup>

ACKNOWLEDGING that the African Union urged member states and regional economic communities (RECs) to effectively mainstream fisheries and aquaculture in national agricultural investment plans so as to expedite the sector's growth and contribution to the economic growth of states.

RECOGNISING that the SADC Secretariat's 15-year Regional Indicative Strategic Development Plan supports regional economic integration to fight poverty, protect the environment, and promote peace and security.

RECOGNISING that the SADC Food and Nutrition Security Strategy (2015-2025) aims to significantly reduce food and nutrition insecurity in the region by 2025 by (i) promoting the availability of food through improved production, productivity and competitiveness; (ii) improving access to adequate and appropriate food in terms of quality and quantity; (iii) improving the utilisation of nutritious (e.g. fish), healthy, diverse and safe food for consumption under adequate biological and social environment with proper health care; and (iv) ensuring the stable and sustainable availability, access and utilisation of food.

PEACE, PROSPERITY AND REGIONAL INTEGRATION

RECOGNISING that EAC has a Regional Strategy and Implementation Plan for Sustainable Aquaculture (2015–2020)<sup>2</sup>, which aims to increase aquaculture production by 100 percent, raising it to 60,000–80,000 mt/year, and increase fish feed production by more than 150 percent (with at least three industrial-scale companies in competition within the region, each producing more than 10,000 mt/year).

RECOGNISING that significant strides have been taken in sustainable aquaculture development, especially in countries where market, governance and investment conditions were conducive to economic growth and where governments demonstrated political will to support the development of a sustainable aquaculture sector.<sup>3</sup>

RECOGNISING that 30 of the 40 countries which have signed their Comprehensive Africa Agriculture Development Programme (CAADP) Compacts have identified fisheries and aquaculture as one of the key drivers of the 6 percent growth target.<sup>4</sup>

RECOGNISING that the SADC Secretariat's regional strategy for aquaculture<sup>5</sup> aims to increase the contribution of aquaculture to local, national and regional economic growth and trade.

RECOGNISING that the AdvanceAfrica aquaculture investment assessment tool<sup>6</sup> identified key success factors, including the nature of policies and regulations relating to commercial aquaculture development and support of the sector.

CONSIDERING that the development of sustainable market-led aquaculture at different scales will only happen through research advances across the key domains of fish breeding and genetics, disease detection and control, nutrition and feeds, and enhanced climate resilient and environmentally sustainable production systems that will contribute to gender-inclusive sustainable growth, while ensuring that poor farmers, their families and communities access the nutritional and economic benefits from a sustainably growing aquaculture sector.

RECOGNISING that the various challenges can be addressed by scientific and technical cooperation, policy coordination and regulatory frameworks is critical for the sector to further develop.

THEREFORE, in support of the Conferences of African Ministers Responsible for Fisheries and the Malabo Declaration on Accelerated Agricultural Growth and

PEACE, PROSPERITY AND REGIONAL INTEGRATION

Transformation for Shared Prosperity and Improved Livelihoods that further endorsed the outcomes of the Conferences of African Ministers, the Cape Town African policy day, named parties support and recommend:

1. SADC and EAC to establish cooperative institutional frameworks for effective governance, to create consolidated and coordinated R&D centres of excellence for sustainable aquaculture research and invest in capacity building and educational programs to disseminate and support adoption of best management practices for profitable, productive, environmentally-sustainable and nutrition-sensitive aquaculture.
2. SADC and EAC, in cooperation with national, regional and international research institutions, to provide member states with comprehensive and evidence-based guidance that addresses priorities to deal with emerging advances in aquaculture, including but not limited to:
  - a. research to understand and overcome demand and supply challenges;
  - b. fish breeding nucleus and genetics programs to ensure production and effective dissemination at scale of high quality disease-free fish seed;
  - c. establishment of a harmonised continental aquatic animal health strategy to take into account factors such as capacity building, provisions for disease notification and certification;
  - d. establishment of a fish breeding platform that will be responsible for developing a set of protocols to guide genetic improvement as well as the establishment of a gene bank for African farmed tilapia fish species;
  - e. high-quality technical advice underpinned by evidence-based research and lessons learned to support policy-makers to enable them to effectively undertake requisite policy and governance reforms noting that:
    - i. Policies should be easily applicable and understandable by the target audience of fish farmers and other key stakeholders within the fish agri-food system.
    - ii. There is a need to separate aquaculture and fisheries policies.
    - iii. The need for balance between the requirements for conservation of aquatic biodiversity and food and nutrition security must be addressed.
  - f. research to identify optimal factors of production, including water, stocking materials, feed and managerial skills to stimulate adaptation of sustainable aquaculture businesses that lead to increased farmer incomes, resilience to external shocks, and rural job creation;
  - g. research to better understand how to create more efficiency in value chains that improve market engagement.
3. International research organisations, including WorldFish and the new CGIAR Research Program on Fish Agri-Food Systems (FISH), to continue their active role as research partners in the development of quality science to underpin the sustainable growth of aquaculture in the region.
4. SADC and EAC to put in place a regional coordination mechanism for aquaculture R&D within the African Union Policy Framework and Reform

Strategy. This should consider the need to ensure that research outputs from universities and national research institutions are integrated into national aquaculture management and development.

5. SADC and EAC, through the regional coordination mechanism, to prioritise resource mobilisation to support research for the development of the aquaculture sector.
6. That the aforementioned SADC/EAC coordination mechanism is taken into account in the establishment of other regional aquaculture coordination mechanisms to ensure coherence and avoid duplication of effort across the continent.
